

XD-2i Explosives Detection System at CST/CERFP Commanders Conference

Source: American Innovations, Inc. News Room

January 27, 2009 (Atlanta, GA) - On January 27th, 28th and 29 of 2009, American Innovations, Inc presented its explosives detection system, the XD-2i, at the Annual CST/CERFP (Civil Support Teams / CBRNE Enhanced Response Force Packages) Commanders Conference in Atlanta, GA. Explosives Detection was very much on the mind of the Commanders and discussion of how to detect, identify, mitigate and eliminate the IED threat and threat from homemade explosives was at the forefront. Members and Commanders from all 55 WMD-CST teams and all CERFP teams around the country gathered to learn from each other and to gain new insight into how technology can assist in their mission.

The XD-2i Portable explosives detection systems was featured at the meeting and drew a lot of attention from high ranking officers as well as soldiers for its ability to detect the full spectrum of commercial, military and homemade improvised explosives in a single test. Fast, light, safe and easy to use, the XD-2i impressed those attending, especially those who had experience with other types of explosives detection technology.

Several of the commanders present have already begun working with American Innovations, Inc. to add the XD-2i to their equipment list, either replacing explosives detection systems already in place or adding explosives detection capabilities in FY09 or early FY10.
