

American Innovations exhibits at GSA Expo 2008

Source: American Innovations, Inc. News Room

April 28, 2008 (Anaheim, CA) - The 2008 GSA Expo, held April 22-24 in Anaheim, California, gathered over 9,000 attendees from 340 different federal agencies, 14 states, 3 foreign countries, and over 3,200 exhibitors representing 730 companies including American Innovations, Inc.

It is Important to note that the GSA Expo of 2008 was an environment conscious event where several green efforts were implemented in order to minimize its impact on the planet. In addition to its commitment to "green efforts" the Expo provided training sessions and the opportunity for many buyers and sellers to come together and discuss ways on increasing Government related purchases and offerings.

American Innovations, Inc demonstrated its Explosives Detection products XD-2i and XD-3i as well as the extremely low light color camera IK-1000ME and high definition LCDs by Toshiba. Other items included in American Innovations, Inc. GSA contract GS-07F-5556P were not demonstrated but information was provided to booth visitors.

Technologies available through American Innovations Inc's GSA contract include: explosives detection equipment and accessories, bomb resistant waste receptacles, Toshiba Specialty cameras and accessories, and Wattec surveillance cameras and accessories. For all DOD buyers, American Innovations, Inc also holds a DOD Email contract (SPM7W1-05-DE-045) which allows DOD buyers to buy selected products and services from American Innovations, Inc using that contract vehicle.
