

## American Innovations Sponsors Attendee Bags at International Security Conference

Source: American Innovations, Inc. News Room

**September 10, 2007 (New York, NY)** - American Innovations, Inc. (AI) is pleased to announce the sponsorship of the trade show bags for the attendees at this year's International Security Conference (ISC East) being held on 9/11 and 9/12 at the Javitz Convention Center in NYC.

AI will be introducing to the international security marketplace their new explosives trace detector that was only released a few weeks earlier at the Department of Defense (DOD) Force Protection Equipment Demonstrations (FPED VI) held August 14 - 17 in Stafford, Virginia.

Incorporating analytical explosives detection chemistry their new Explosives Trace Detector (XD-2i) will detect over 40 explosives in 1 to 30 seconds, regardless of environmental conditions. Detection time varies based on the type of explosives detected. The XD-2i will readily and reliably detect liquid explosives, black powder, nitrocellulose, homemade explosives, chlorates, smokeless gun powders, ANFO, nitrates, nitro-aromatics, plastic explosives, peroxides, nitramines, explosive taggants, and many other wet or dry threat explosives.

Unlike other explosives trace detectors costing more to own, operate, and maintain the XD-2i requires no warm-up time, no calibrating, no downtime after detecting explosives, and virtually no training. Aside from swipes and solutions there are no consumables, making the cost per test lower than any other explosives trace detector. This explosives detector is capable of quickly analyzing broken cargo, clothes, liquids, luggage, mail, packages, skin, soil, unattended or suspect items, and vehicles for trace amounts of explosives. The XD-2i can also detect Gun Shot Residue, verify Bulk Explosives, and analyze soils for Unexploded Ordnance (UXO) detection and demilitarization requirements.

AI will also be promoting at the ISC East conference their Computerized X-Ray Inspection Systems (CXIS Series), Mobile X-Ray Inspection System (MXIS), Bomb Resistant Trash Cans, and Toshiba's line of remote head micro cameras, 3 CCD cameras, and specialized low light color camera the IK1000-ME.

### *About American Innovations, Inc:*

American Innovations, Inc. is a privately owned small business that provides turnkey solutions to government and military agencies, defense contractors, system integrators, corporations, and high profile facilities. Our ability to satisfy customer requirements and safeguard people, facilities, and high profile assets is achieved through assessments, strategic planning, technology integration, and sensible policy implementation. Creating a safer world and protecting sensitive but unclassified information is our mission.
