

American Innovations Sponsors Coffee Stations at the ASIS 2007 Conference

Source: American Innovations, Inc. News Room

September 17, 2007 (Las Vegas, NV) - American Innovations, Inc. (AI) is pleased to announce their sponsorship of the coffee stations at the 53rd annual ASIS International 2007 conference being held September 24 - 27 at the Las Vegas Convention Center in Las Vegas, Nevada.

During ASIS 2007, American Innovations will be demonstrating their new portable explosives trace detector that was only released a month earlier at the Department of Defense (DOD) Force Protection Equipment Demonstrations (FPED VI) held August 14 - 17 in Stafford, Virginia.

The XD-2i Explosives Trace Detector incorporating analytical explosives detection chemistry reliably detects over 40 explosives in 1 to 12 seconds, regardless of environmental conditions. Detection time varies based on the type of explosives detected. Recent improvements to the system's programming and chemistry have reduced the detection time to these current levels. The XD-2i detects homemade explosives, peroxides, liquid explosives, black powder, chlorates, nitrocellulose, smokeless gun powders, ANFO, nitrates, nitro-aromatics, plastic explosives, nitramines, explosive taggants, and many other wet or dry threat explosives.

What separates the AI explosives trace detector (ETD) from other ETDs costing significantly more to own, operate, and maintain is that the XD-2i requires no warm-up time, no calibrating, no downtime after detecting explosives, and virtually no operator or maintenance training. In addition, aside from swipes and solutions there are no consumables, making the cost per test substantially less expensive than any other ETD in the market today. This explosives detector is capable of analyzing broken cargo, clothes, liquids, luggage, mail, packages, skin, soil, unattended or suspect items, and vehicles for trace amounts of explosives. The XD-2i can also detect Gun Shot Residue, verify Bulk Explosives, and analyze soils for Unexploded Ordnance (UXO) detection and demilitarization requirements.

About American Innovations, Inc:

American Innovations, Inc. is a privately owned small business that provides turnkey solutions to government and military agencies, defense contractors, system integrators, corporations, and high profile facilities. Our ability to satisfy customer requirements and safeguard people, facilities, and high profile assets is achieved through assessments, strategic planning, technology integration, and sensible policy implementation. Creating a safer world and protecting sensitive but unclassified information is our mission.
