

American Innovations Participates at National First Responders Conference

Source: American Innovations, Inc. News Room

October 1, 2007 (Colorado Springs, CO) - American Innovations, Inc. (AI) is pleased to announce their participation at the inaugural National First Responders Conference held October 1st in Colorado Springs, Colorado. This inaugural conference hosted by the National Homeland Defense Foundation conference is co-sponsored by The University of Colorado, in Colorado Springs, The Colorado Springs Chamber of Commerce, The Center for Homeland Security, University of Colorado, Colorado Springs, Penrose Hospital, 5 Star Insurance Company, and American Medical Response.

During the conference, American Innovations will be promoting their new portable explosives trace detector that was first introduced at the Department of Defense (DOD) Force Protection Equipment Demonstrations (FPED VI) held August 14 - 17 in Stafford, Virginia.

The XD-2i Explosives Trace Detector is a portable explosives trace detector that will reliably detect over 40 explosives in 1 to 12 seconds, regardless of environmental conditions or user experience. Detection time varies based on the type of explosives detected. The XD-2i detects homemade explosives, peroxides, liquid explosives, black powder, chlorates, nitrocellulose, smokeless gun powders, ANFO, nitrates, nitro-aromatics, plastic explosives, nitramines, explosive taggants, and many other wet or dry threat explosives.

The AI explosives trace detector (ETD) requires no warm-up time, no calibrating, no downtime after detecting explosives, and virtually no training. The costs per tests are extremely low and the only consumables are swipes and solutions. The XD-2i is capable of analyzing broken cargo, clothes, liquids, luggage, mail, packages, skin, soil, suspect items and vehicles for trace amounts of explosives. This new portable detection system can also detect Gun Shot Residue, verify Bulk Explosives, and analyze soils for Unexploded Ordnance (UXO) devices.

About American Innovations, Inc:

American Innovations, Inc. is a privately owned small business that provides turnkey solutions to government and military agencies, defense contractors, system integrators, corporations, and high profile facilities. Our ability to satisfy customer requirements and safeguard people, facilities, and high profile assets is achieved through assessments, strategic planning, technology integration, and sensible policy implementation. Creating a safer world and protecting sensitive but unclassified information is our mission.
