

American Innovations exhibits at 2007 ICTOA Conference in Las Vegas

Source: American Innovations, Inc. News Room

October 3, 2007 (Colorado Springs, CO) - American Innovations, Inc. (AI) is pleased to announce their participation at the 2007 International Counter Terrorism Officers Association (ICTOA) conference being held October 2 – 4 in Las Vegas, Nevada. The ICTOA is comprised of law enforcement personnel, firefighters, military, first responders, private/corporate security, and other related professionals. Attendees at the 5th annual ICTOA Conference will receive a trade show bag and coffee mug, compliments of American Innovations.

During the conference AI will be featuring and demonstrating their new portable explosives trace detector that was introduced at the Department of Defense (DOD) Force Protection Equipment Demonstrations (FPED VI) held August 14 - 17 in Stafford, Virginia.

The XD-2i Explosives Trace Detector incorporating analytical explosives detection chemistry reliably detects over 40 explosives in 1 to 12 seconds, regardless of environmental conditions. Detection time varies based on the type of explosives detected. Recent enhancements to the system's programming and chemistry have reduced the detection time to these current levels. The XD-2i detects homemade explosives, peroxides, liquid explosives, black powder, chlorates, nitrocellulose, smokeless gun powders, ANFO, nitrates, nitro-aromatics, plastic explosives, nitramines, explosive taggants, and many other wet or dry threat explosives.

The AI explosives trace detector (ETD) costing significantly less to own, operate, and maintain than other explosives detectors requires no warm-up time, no calibrating, no downtime after detecting explosives, and virtually no training. The costs per tests for this new explosives detector are extremely low and the only consumables are swipes and solutions. The XD-2i is capable of analyzing broken cargo, clothes, liquids, luggage, mail, packages, skin, soil, suspect items and vehicles for trace amounts of explosives. The new detector can also detect Gun Shot Residue, verify Bulk Explosives, and analyze soils for Unexploded Ordnance (UXO) Devices.

AI will also be promoting at the 2007 ICTOA conference their Computerized X-Ray Inspection Systems (CXIS Series), Mobile X-Ray Inspection System (MXIS), Bomb Resistant Trash Cans, and specialty surveillance cameras.

About American Innovations, Inc:

American Innovations, Inc. is a privately owned small business that provides turnkey solutions to government and military agencies, defense contractors, system integrators, corporations, and high profile facilities.
