

TSWG invites American Innovations to exhibit and present at its Explosives Detection Symposium and Workshop

October 20, 2009 (San Diego, CA) - On October 20-23, 2009, American Innovations, Inc. provided demonstrations and instruction on the XD-2i Portable Explosives Detector at the Technical Support Working Group (TSWG) Explosives Detection Symposium and Workshop. TSWG's Explosives Detection symposium and workshop provided a venue for U.S. and allied governments, academia, and industry to share information, develop partnerships, advance technology, provide training, and demonstrate capabilities in the area of explosives detection.

The XD-2i became a focus of attention for attendees looking for a single, lightweight, fast and easy to use explosives detector that can detect all commercial, military and homemade explosives (HME) in a single sample. Explosives Detection experts from many areas of Government, Military and Academia were impressed with the broad detection capabilities offered by the XD-2i with no warm-up, no calibration, and no clear-down delays after detection.

American Innovations was also invited to make a presentation to a group of US and foreign experts, focusing on colorimetric explosives detection chemistry. TSWG gathered an excellent line up of experts to present at these Town Hall style presentations.

American Innovations, Inc. continues to work with members of the government, military and academia to advance the fight against Terrorism in general and IEDs in particular, domestically and internationally. We were grateful for the opportunity to participate at TSWG's Explosives Detection Symposium and Workshop and look forward to participating at future TSWG events.
